

## **Micron**

Micron's Signal Integrity group has been authorized to hire a BS-level graduate as early as December.

The team is mainly looking for a student interested in the area of electromagnetics, having demonstrated that interest by focusing their elective undergraduate courses in that area.

The position title will be Simulation Engineer. The candidate will be expected to run integrated circuit package model extraction followed by corresponding signal integrity / power integrity analysis of the extracted models. Familiarity with Ansoft tools like HFSS and Agilent simulation software like ADS will be helpful, as well as familiarity with transistor-level circuit operation, as much of the follow-up analysis will incorporate specific Micron Input/Output circuitry.

Those interested should forward a cover letter and resume to Tim Hollis, [thollis@micron.com](mailto:thollis@micron.com)
