1 Introduction

Write a short introduction that summarizes the activities performed in the lab, and explains how they relate to concepts covered in the lectures.

2 Pre-Lab

Provide the details of your pre-lab calculations. If you wish, you may provide only the final results in this section and include the detailed calculations in the Appendix in handwritten form.

3 Measured/Simulated Results

Provide your measured and/or simulated (from Hspice) results in this section. Measured results should be provided in tables or individually with units specified, and appropriate labeling should be provided as to which part of the lab the results pertain to. Plots from simulations should be captured as image files and included as figures, as in Fig. 1.

4 Analysis

Provide answers for the questions in the Analysis section of the lab assignment. Details of supporting calculations can be handwritten and included in the appendix as long as they are clearly labeled.

5 Conclusion

Write a short conclusion that describes what you have learned by performing this lab.
Appendix

You may include handwritten details of supporting calculations in this section as long as they are clearly labeled and understandable by the grader.
