1. 

Calculate $\mathrm{i}_{1}$.
2.

Calculate $\mathrm{V}_{1}$.
3. Find the total resistance between terminals $\mathbf{a}$ and $\mathbf{b}$.

4. Derive an expression for $\mathrm{i}_{1}$ in the circuit below containing not more than circuit parameters R1, R2, R3, Vs, and/or is.

5.

| Derive the expression for $V_{11}$ containing not more than circuit parameters $\alpha, \mathrm{R}_{1}, \mathrm{R}_{2}, \mathrm{R}_{3}, \mathrm{~V}_{\mathrm{a}}$, and $\mathrm{i}_{\mathrm{a}}$.
6. Using the circuit shown in Problem \#5, derive an expression for the power through R2. The known values are $\alpha, i_{a}, V_{a}, R_{1}, R_{2}$ and $R_{3}$.
7. The op-amp operates in the linear mode. Using an appropriate model of the op amp, derive an expression for $\mathrm{V}_{\mathrm{o}}$ in terms of not more than $\mathrm{V}_{\mathrm{s}}, \mathrm{i}_{\mathrm{s}}, \mathrm{R}_{1}$, and/or $\mathrm{R}_{2}$. Note that the current source is not ideal and has a voltage drop across it.

8. The op-amp operates in the linear mode. Using an appropriate model of the op amp, derive an expression for $\mathrm{V}_{\mathrm{o}}$ in terms of not more than $\mathrm{V}_{\mathrm{a}}, \mathrm{V}_{5}, \mathrm{i}_{\mathrm{s}}, \mathrm{R}_{1}, \mathrm{R}_{2}, \mathrm{R}_{3}, \mathrm{R}_{4}$ and $\mathrm{R}_{5}$. Note that the current source is not ideal and has a voltage drop across it.

9. The op-amp operates in the linear mode. Using an appropriate model of the op-amp, derive an expression for Vo in terms of not more than $\mathrm{i}_{\mathrm{a}}, \mathrm{R} 1, \mathrm{R} 2, \mathrm{R} 3$, and/or Va. Note that the current source is not ideal and has a voltage drop across it.

10. The op-amp operates in the linear mode. Using an appropriate model of the op-amp, derive an expression for Vo in terms of not more than $\mathrm{i}_{\mathrm{a}}, \mathrm{R} 1, \mathrm{R} 2, \mathrm{R} 3$, and/or Va. Note that the current source is not ideal and has a voltage drop across it. (updated figure)
