## ECE 2210/00 Exam 1 given: Spring 08 (The space between problems has been removed.)

To get the most possible partial credit, always show all the intermediate values that you can calculate. If further calculations depend on a value that you can't figure out, just use a symbol (like $\mathrm{I}_{\mathrm{R} 1}$ ) or a guessed value and proceed.

1. (21 pts) Find the resistor values. Show your work

Note: feel free to show answers \& work right on the schematic
a) $\mathrm{R}_{1}=$ ?
b) $\mathrm{R}_{2}=$ ?
c) $\mathrm{R}_{3}=$ ?
d) How much power is dissipated by $\mathrm{R}_{3}$ ?
$\mathrm{P}_{\mathrm{R} 3}=$ ?

Ideal ammeter
reads 80 mA .

Ideal ammeter reads 30 mA .

2. (21 pts) Use the method of superposition to find the voltage across $\mathrm{R}_{2}\left(\mathrm{~V}_{\mathrm{R} 2}\right)$ and the current through $\mathrm{R}_{1}\left(\mathrm{I}_{\mathrm{R} 1}\right)$. Be sure to clearly show and circle your intermediate results.

3. (20 pts) a) Find and draw the Thévenin equivalent of the circuit shown.
The load resistor is $\mathrm{R}_{\mathrm{L}}$.
b) Find and draw the Norton equivalent of the same circuit.
c) Find the load voltage using your Norton equivalent circuit.
d) Find the power dissipation in the load. resistor $\left(\mathrm{R}_{\mathrm{L}}\right) . \quad \mathrm{P}_{\mathrm{RL}}=$ ?
4. (20 pts) a) Use nodal analysis to find the voltage across $\mathrm{R}_{1}\left(\mathrm{~V}_{\mathrm{R} 1}\right)$.

You MUST show all the steps of nodal analysis work to get credit, including drawing appropriate symbols and labels on the circuit shown.
b) Find the current through $\mathrm{R}_{2}\left(\mathrm{I}_{\mathrm{R} 2}\right)$.

$$
\mathrm{I}_{\mathrm{R} 2}=?
$$
