1. (11 pts) Find the resonant frequency (or frequencies) of the circuit shown (in cycles/sec or Hz ).

2. (26 pts) The switch has been closed for a long time and is opened (as shown) at time $\mathrm{t}=0$.
a) Find the complete expression for $i_{L}(t)$.
b) Find $\mathrm{i}_{\mathrm{L}}$ at time $\mathrm{t}=1.5 \tau . \quad \mathrm{i}_{\mathrm{L}}(1.5 \cdot \tau)=$ ?

$\mathrm{R}_{3}:=120 \cdot \Omega$
$\mathrm{L}:=18 \cdot \mathrm{mH}$
c) At time $t=1.5 \tau$ the switch is closed again. Will the time constant be different now? If yes, find the new time constant.
3. (25 pts) For partial credit, you must show work and/or intermediate results.
a) Find $\mathbf{I}_{2}$
b) Find $\mathbf{V}_{\mathbf{S}}$
c) Find $\mathbf{I}_{1}$ in polar form.

4. (20 pts) Find $\mathbf{Z}_{\text {eq }}$ in simple polar form (give me numbers \& units).
$\mathrm{f}:=220 \cdot \mathrm{~Hz}$

## ECE 2210/00 Exam 2 Fall 10 p2

5. 18 pts ) The voltage across a capacitor is shown below. Make an accurate drawing of the capacitor current. Make reasonable assumptions where necessary. Label your graph.

Note: You will be graded on the accuracy of your plot at $0,4,9$ and 10 ms , so calculate those values and plot or label them carefully. Between those points your plot must simply be the correct shape.

You MUST SHOW how you calculate your values starting from the original relationships between voltage and current. That is: Start with the interger and/or differential equations for the capacitor!
${ }^{\mathrm{v}} \mathrm{C}$
(V)

## Answers

1. $5033 \cdot \mathrm{~Hz}$
2. a) $112.5 \cdot \mathrm{~mA}-62.5 \cdot \mathrm{~mA} \cdot \mathrm{e}^{\frac{-1}{56.25 \cdot \mu \mathrm{~s}}}$
b) $98.6 \cdot \mathrm{~mA}$
c) $108.3 \cdot \mu \mathrm{~s}$
3. a) $50 \mathrm{~mA} /-30^{\circ}$
b) $(8.13+1.08 \cdot \mathrm{j}) \cdot \mathrm{V}$
c) $22.4 \mathrm{~mA} /-41.9^{\circ}$
4. $2.82 \Omega / 55.6^{\circ}$
5. 0-4ms: flat at -6mA
$4 \mathrm{~ms}-9 \mathrm{~ms}$ : ramps up from 0 to 7.2 mA
Beyond 9ms: flat at 0A
