6. (18 pts) The voltage waveform shown below (dotted line) is applied to the circuit shown at right. Accurately draw the output voltage you expect to see across the $20 \Omega$ resistor. Draw on the same graph. Label important times and/or voltage levels.

7. (18 pts) Fill in the blanks in the circuit below. You may neglect the base bias current $\left(\mathrm{I}_{\mathrm{B}}\right)$.

8. ( 15 pts ) The same input voltage (shown right) is connected to two different op-amp circuits.
a) The output voltages are also shown. Indicate which output voltage is $v_{01}$ and which is $v_{02}$ by circling the correct answer at each waveform.

b) Find the values of the two unknown resistors.
