## ECE 2210 Final given: Spring 15

Closed Book, Closed notes except preprinted yellow sheet, Calculators OK. Show all work to receive credit. Circle answers, show units, and round off reasonably

1. (15 pts) a) Find the s-type transfer function of the circuit shown. Consider the motor current ( $\mathbf{I}_{\mathbf{m}}$ ) as the "output".

You MUST show work to get credit. Simplify your expression for $\mathrm{H}(\mathrm{s})$ so that the denominator is a simple polynomial.

$$
\mathbf{H}(\mathrm{s})=\frac{\mathbf{I}_{\mathbf{m}^{(s)}}}{\mathbf{I}_{\mathbf{i n}}(\mathrm{s})}=?
$$

The motor may be modeled as a resistor in series with an inductor, like this:

b) How many poles does this transfer function have?
c) How many zeroes does this transfer function have?

If it has 1 or more, express them (probably in terms of $\mathrm{R}_{1}, \mathrm{R}_{2}, \mathrm{~L}$ and C ).
2. (17 pts) Find the values below. Show your work.
a) $\mathrm{V}_{\text {Is }}=$ ?
a) $\mathrm{V}_{\mathrm{Is}}=$ ?

Note: feel free to show work \& answers right on the schematic
b) $\mathrm{I}_{\mathrm{V} 2}=$ ?
c) $\mathrm{P}_{\mathrm{S}}=$ ?

b) $I_{V 2}=?$
3. (20 pts) The transformer shown in the circuit below is ideal. It is rated at $600 / 120 \mathrm{~V}, 1.5 \mathrm{kVA}, 60 \mathrm{~Hz}$ Find the following:

All values are RMS unless specified otherwise.
a) The primary current (magnitude).

$$
\left|\mathbf{I}_{1}\right|=?
$$

b) The secondary current (magnitude). $\left|\mathbf{I}_{2}\right|=$ ?
c) The secondary voltage (magnitude). $\left|\mathbf{V}_{\mathbf{2}}\right|=$ ?
d) The complex power $O R(P$ and $Q)$ used by the load. $\quad S_{\mathbf{L}}=$ ?
e) Is this transformer operating within its ratings? Show your evidence.
4. (25 pts) R, L, \& C together are the load in the circuit shown. Find the following for the load (in dotted box):
Be sure to show the correct units for each value.
a) The real power. $\mathrm{P}=$ ?
b) The reactive power. $\mathrm{Q}=$ ?
c) The complex power. $\mathbf{S}=$ ?
d) The apparent power. $|\mathbf{S}|=$ ?
e) The power factor. $\mathrm{pf}=$ ?
f) The power factor is: i) leading
ii) lagging
g) The magnitudes of the three currents. $\left|\mathbf{I}_{\mathbf{S}}\right|=$ ?

h) Is there something weird about these currents? If so, what?
5. ( 30 pts ) A couple of transistors are used to control the current flow through an inductive load.
a) The switch has been open for a long time. You measure the voltage at the collector of $\mathrm{Q}_{1}$ to be the value shown (referenced to ground). What is the minimum $\beta_{2}$ needed to insure that transistor $\mathrm{Q}_{2}$ is in saturation? You may assume that the emitter current of $\mathrm{Q}_{1}$ is approximately equal to the collector current of $\mathrm{Q}_{1}$.

$$
\beta_{2 \min }=?
$$

b) Find the power dissipated in transistor $\mathrm{Q}_{2}$ with this $\beta . \quad \mathrm{P}_{\mathrm{Q} 2}=$ ?

c) Find the $\beta$ of $Q_{1}, \quad \beta_{1}=$ ?
minimum
d) Is this a maximum value of $\beta_{1}$ ? (circle one)
actual
e) Find the power dissipated in transistor $\mathrm{Q}_{2}$ if $\quad \beta_{2}:=20 \quad \mathrm{P}_{\mathrm{Q} 2}=$ ?
f) Find the power dissipated in transistor $\mathrm{Q}_{2}$ if $\quad \beta_{2}:=20$ and the switch is closed. $\quad \mathrm{P}_{\mathrm{Q} 2}=$ ?
g) The diode in this circuit conducts a significant current: (circle one)
A) never.
C) whenever the switch is closed.
E) when the switch first opens.
B) when the switch first closes.
D) always.
F) whenever the switch is open.
h) What is the maximum diode current you expect when the switch is cycled. (Answer 0 if it never conducts.)

## ECE 2210 Final given: Spring 15 p3

6. ( 30 pts ) The same input signal (at right) is connected to several op-amp circuits below. Sketch the output waveform for each circuit. Clearly label important voltage levels on each output. If I can't easily make out what your peak values are, l'll assume you don't know. Don't forget to show inversions. All op-amps are powered by $\pm 12 \mathrm{~V}$ power supplies.
a)

Use constant-voltage-drop models for the diodes and LEDs on this exam. ECE 2210 Final given: Sp 15 p4
7. ( 25 pts ) Assume that diodes $\mathrm{D}_{1}$ and $\mathrm{D}_{2} \mathrm{DO}$ conduct. Assume that diode $\mathrm{D}_{3}$ does NOT conduct.
a) Find $\mathrm{I}_{\mathrm{R} 2}, \mathrm{I}_{\mathrm{D} 2}, \mathrm{I}_{\mathrm{D} 1}$ \& $\mathrm{V}_{\mathrm{D} 3}$ based on these assumptions. Stick with these assumptions even if your answers come out absurd.
$\mathrm{I}_{\mathrm{R} 2}=$ $\qquad$
$\mathrm{I}_{\mathrm{D} 2}=$ $\qquad$
$\mathrm{I}_{\mathrm{D} 1}=$ $\qquad$
${ }^{\mathrm{V}} \mathrm{D}_{3}=$ $\qquad$

b) Based on the numbers above, was the assumption about $\mathrm{D}_{1}$ correct? yes no (circle one) How do you know? (Specifically show a value which is or is not within a correct range.)
c) Was the assumption about $\mathrm{D}_{2}$ correct? How do you know? (Show a value \& range.)
d) Was the assumption about $\mathrm{D}_{3}$ correct? yes no

How do you know? (Show a value \& range.)
yes no
$\begin{aligned} & \\ & \text { yes } \text { (circle one) } \\ & \text { no }\end{aligned}$
(circle one)
e) Based on your answers to parts b), c) \& e), Circle one: i) The real $I_{R 2}<I_{R 2}$ calculated in part a.

You do not need to justify your answer.
ii) The real $I_{R 2}=I_{R 2}$ calculated in part a.
iii) The real $\mathrm{I}_{\mathrm{R} 2}>\mathrm{I}_{\mathrm{R} 2}$ calculated in part a.
8. (18 pts) The voltage waveform shown is applied to the circuit. Accurately draw the diode current ( $\mathrm{i}_{\mathrm{D} 1}$ ) you expect to see. Label important times and current levels.

9. Do you want your grade and scores posted on the Internet? If your answer is yes, then provide some sort of alias:
otherwise, leave blank
Answers

ECE 2210 Final given: Spring 15 p5
The grades will be posted on line in pdf form in alphabetical order under the alias that you provide here. I will not post grades under your real name or an alias that looks like a real name or u-number. It will show the homework, lab, and exam scores of everyone who answers here.

1. a) $\frac{L_{m} \cdot \mathrm{C}}{s^{2}+\left(\frac{R_{m}}{L_{m}}+\frac{1}{R \cdot C}\right) \cdot s+\frac{1}{L_{m} \cdot C} \cdot\left(1+\frac{R_{m}}{R}\right)}$
2. a) $2.34 \cdot \mathrm{~kW}$
b) $-1.01 \cdot \mathrm{kVAR}$
c) $2.34-1.01 \cdot \mathrm{j} \mathrm{kVA}$
b) $2 \quad$ c) 0
3. a) $3.04 \cdot \mathrm{~A}$
b) $15.2 \cdot \mathrm{~A}$
4. a) $7 \cdot V$
b) $4.25 \cdot \mathrm{~mA}$
c) $129.5 \cdot \mathrm{~mW}$
e) $\mathrm{NO} 3.04 \cdot \mathrm{~A}>2.5 \cdot \mathrm{~A}$
g) $10.6 \cdot \mathrm{~A} \quad 12.5 \cdot \mathrm{~A} \quad 12 \cdot \mathrm{~A} \quad$ h) $\left|\mathbf{I}_{\mathbf{S}}\right|$ is the smallest of the three because $\mathbf{I}_{\mathbf{R}}$ and $\mathbf{I}_{\mathbf{C}}$ are badly out of phase
5. a) 26
b) $0.65 \cdot \mathrm{~W}$
C) 189
d) actual
e) $5 \cdot \mathrm{~W}$
f) $0 \cdot \mathrm{~W}$
g) $B$ )
h) $3.25 \cdot \mathrm{~A}$
6. $\mathrm{v}_{\mathrm{oa}}(\mathrm{t})$ (Volts)

7. a) $30 \cdot \mathrm{~mA} \quad-4 \cdot \mathrm{~mA} \quad 26 \cdot \mathrm{~mA} \quad 0.92 \cdot \mathrm{~V}$
b) yes $26 \cdot \mathrm{~mA}>0$
c) no $-4 \cdot \mathrm{~mA}<0$
d) no $\quad 0.92 \cdot \mathrm{~V}>0.7 \mathrm{~V}$
e) ii)
8.
