## The 2nd exam will include this material

1. For the circuit shown, find the following:
a) At what frequency would the magnitude of the total impedance be $240 \Omega$ ?
b) At this frequency, what is the phase angle of the impedance?
c) At this frequency, you want to add a capacitor in series to make the circuit appear purely resistive (the impedance has no imaginary component). Find the value of the capacitor.

2. You need to design a circuit in which the current $(\mathrm{i}(\mathrm{t}))$ leads the voltage $\left(\mathrm{v}_{\mathrm{s}}(\mathrm{t})\right)$ by $36^{\circ}$ of phase.
a) What should go in the box: R, L, C ?
b) Find its value.

3. The phasor diagram at right shows the source voltage and two branch currents of a parallel circuit. Find the inpedance of each of the two branches.

4. a) Find all the currents, $\mathbf{I}_{\mathbf{1}}, \mathbf{I}_{\mathbf{2}}$, and $\mathbf{I}_{\mathbf{T}}$.
b) Draw a phasor diagram showing $\mathbf{I}_{1}, \mathbf{I}_{2}$, and $\mathbf{I}_{\mathbf{T}}$ to scale so that you can show that they obey KCL.

5. a) Find the AC current source, $\mathbf{I}_{\text {in }}$ in polar form.
b) Find $\mathbf{V}_{\mathbf{T}}$.
c) Choose one:
i) The source current leads the source voltage.
ii) The source current lags the source voltage.

6. a) Find $\mathbf{Z}_{1}$.
b) To make $\mathbf{Z}_{\mathbf{1}}$ in the simplest way, what part(s) would you need? Just determine the needed part(s) from the list below and state why you made that choice, don't find the values.

| resistor | capacitor | inductor | power supply |  |
| :--- | :---: | :---: | :---: | :---: |
| Thevenin resistor | Ideal transformer | voltmeter | ammeter | current source |
|  | scope |  |  |  |

c) Choose one:
i) $\mathbf{I}_{\mathbf{2}}$ leads the source voltage $\left(\mathbf{V}_{\mathbf{i n}}\right)$
ii) $\mathbf{I}_{\mathbf{2}}$ lags the source voltage $\left(\mathbf{V}_{\text {in }}\right)$
d) Choose one:
i) $\mathbf{I}_{\mathbf{1}}$ leads $\mathbf{I}_{\mathbf{2}}$
ii) $\mathbf{I}_{1}$ lags $\mathbf{I}_{2}$

8. a) Find the total impedance of the circuit.
b) Find $\mathbf{I}_{\mathbf{T}}$.

9. Find $\mathbf{Z}_{\mathrm{eq}}$ in simple polar form.
$\mathrm{f}:=8000 \cdot \mathrm{~Hz}$

## Answers

1. a) $11 \cdot \mathrm{kHz}$
b) $60^{\circ}$
c) $0.0694 \cdot \mu \mathrm{~F}$
2. a) C
b) $6.12 \cdot \mu \mathrm{~F}$
3. $\mathbf{Z}_{\mathbf{1}}=(19.2-33.3 \cdot \mathrm{j}) \cdot \Omega$
$\mathbf{Z}_{\mathbf{2}}=(46.0+19.6 \cdot \mathrm{j}) \cdot \Omega$
4. a) $(0.197+0.138 \cdot \mathrm{j}) \cdot \mathrm{A}+0.096 \cdot \mathrm{~A}=0.293+0.138 \mathrm{j} \cdot \mathrm{A}$
5. a) $60 / 36.87^{\circ} \mathrm{mA}$
b) $11.54 \underline{21^{\circ}} \mathrm{V} \quad$ c) i)
6. a) $172 / 53.4^{\circ} \Omega$
b) phase angle $>0$, resistor and inductor
c) i)
d) ii)
7. $657 \Omega / 67.4^{\circ}$
8. a) $21.86 \Omega /-20.38^{\circ}$
b) $0.457 \mathrm{~A} / 20.38^{\circ}$
9. $382 \Omega /-40.2^{\circ}$
