Folder: $\qquad$ Name:

Fill in the blanks in the following circuits. For some of the simple calculations, you may simply write down the answer without showing work.
1.

$I_{D}=$ $\qquad$

Assume the diodes are silicon with a 0.7 V forward voltage drop:
Assume the LEDs have a 2 V forward voltage drop:
A.Stolp rev b

## $\sim 0.7 \mathrm{~V}$

$\xrightarrow[{\xrightarrow{\sim 2 v s}}]{+\underbrace{7}}$
3.
$\mathrm{I}=$ $\qquad$

4.

$\mathrm{I}=$ $\qquad$ $V_{D 2}=$ $\qquad$

Note: In problems 5 and 6 you'll have to make some assumptions about which diode(s) is/are conducting. Work the problem with those assumptions and see if you arrive at impossible answers. If so, change your assumptions and try again.

$\mathrm{I}_{1}=$ $\qquad$ $\mathrm{I}_{2}=$ $\qquad$

There are four possible assumptions.

1. Neither diode conducts.
2. Only $\mathrm{D}_{1}$ conducts.
3. Only $\mathrm{D}_{2}$ conducts.
4. Both diodes conduct.

NOTE: You don't have to try all four possibilities. As soon as you find one that works, that's the answer. So make your best guess first.
6. $\mathrm{I}_{\mathrm{T}}=$ $\qquad$

$\mathrm{I}_{\mathrm{R} 2}=$ $\qquad$
7. $\mathrm{I}_{\mathrm{T}}=$

8. $\mathrm{V}_{\mathrm{R}}=$

10. $\mathrm{I}_{\mathrm{R} 1}:=30 \cdot \mathrm{~mA} \quad \mathrm{R}_{1}=$

11. $\mathrm{V}_{\mathrm{R}}=$ $\qquad$

12. $I_{R}=$

13. $\quad I_{R}=$

Warning: If $\mathrm{I}_{\mathrm{D}}$ turns out negative, it is actually 0 and you must recalculate everything else.

You will need more paper for the next two problems, add a sheet or two.
14. Assume that diode $\mathrm{D}_{1}$ does conduct. Assume that diode $\mathrm{D}_{2}$ does NOT conduct.
a) Find $\mathrm{V}_{\mathrm{R} 1}, \mathrm{I}_{\mathrm{R} 1}, \mathrm{I}_{\mathrm{R} 3}, \mathrm{I}_{\mathrm{D} 1}, \mathrm{~V}_{\mathrm{R} 2}$ based on these assumptions.

Stick with these assumptions even if your answers come out absurd.

$$
\begin{array}{lll}
\mathrm{V}_{\mathrm{R} 1}=? & \mathrm{I}_{\mathrm{R} 1}=? & \mathrm{I}_{\mathrm{R} 3}=? \\
\mathrm{~V}_{\mathrm{R} 2}=?
\end{array}
$$

b) Was the assumption about $\mathrm{D}_{1}$ correct? yes or no

How do you know? (Specifically show a value which is or is not within a correct range.)
c) Was the assumption about $\mathrm{D}_{2}$ correct? yes or no

How do you know?
15. Assume that diodes $\mathrm{D}_{1}$ and $\mathrm{D}_{2} \mathrm{DO}$ conduct.

Assume that diode $\mathrm{D}_{3}$ does NOT conduct.
a) Find $\mathrm{I}_{\mathrm{R} 2}, \mathrm{I}_{\mathrm{D} 2}, \mathrm{I}_{\mathrm{D} 1}, \& \mathrm{~V}_{\mathrm{D} 3}$ based on these assumptions. Stick with these assumptions even if your answers come out absurd.
$\mathrm{I}_{\mathrm{R} 2}=? \quad \mathrm{I}_{\mathrm{D} 2}=? \quad \mathrm{I}_{\mathrm{D} 1}=? \quad \mathrm{~V}_{\mathrm{D} 3}=$ ?

b) Based on the numbers above, was the assumption about $\mathrm{D}_{1}$ correct? yes no How do you know? (Show a value \& range.)
c) Was the assumption about $\mathrm{D}_{2}$ correct? yes no How do you know? (Show a value \& range.)
d) Was the assumption about $\mathrm{D}_{3}$ correct? yes no How do you know? (Show a value \& range.)
e) Based on your answers to parts b), c) \& e):
i) The real $\mathrm{I}_{\mathrm{R} 2}<\mathrm{I}_{\mathrm{R} 2}$ calculated in part a.
iii) The real $I_{R 2}>I_{R 2}$ calculated in part a.
ii) The real $I_{R 2}=I_{R 2}$ calculated in part a.

You do not need to justify your answer.
