

ECE 2200

Electrical Engineering for Civil Engineers Fall 2011 Class Syllabus

Instructor: Arn Stolp

Office: MEB 3256

Phone: U of U: 581-4205

Only if it's important: Home: (801) 969-5553 Cell: (801) 657-7766

E-mail: arnstolp@ece.utah.edu (I don't check my e-mail very regularly, so it may be a while before I read what you send)

Office hours: My "office hours" are the problem sessions. Otherwise it's catch me if you can. If I'm not in my office, check the lab. To increase your chances, talk to me in class, or leave a phone message to say when you'd like to see me. I teach another class at 2:00 p.m. T & Th.

Web Site: <http://www.ece.utah.edu/~ece2210/index2200.html>

Required books and lab supplies:

Practical Electronics for Inventors, by Paul Scherz

You may be required to buy one or more class material packs & Ring binder

Lab notebook (bound or spiral)

Breadboard & Lab parts available for purchase at lab (or you may use my parts)

Prerequisites:

MATH 2250 and PHYCS 2210, PHYCS 2220 is strongly recommended

Introduction:

In case you haven't noticed, you're surrounded by electrical and electronic devices. Electrical motion, measurement and control are powerful and cheap, so they're used everywhere and are part of every technical career, including yours. Maybe you can find a job where other people make all the decisions concerning wiring, power distribution, electric motors, communications systems, instrumentation, and control; but do you *really want* that? Do you really *want* to be the clueless one?

ECE 2210 will introduce you to some of the basics of electrical engineering. This may not seem important now, but I think you will find these concepts very useful in your future classes and jobs. Besides, they'll help you pass the FE exam, and that should be of immediate concern.

I teach concepts and the use of those concepts to solve problems, not formulas and memorization. The hands-down easiest way get a good grade in this class is to learn those concepts.

This class consists of:

Lectures: T & H 9:10 -10:10 am in WEB 2250

Lectures set the direction and tone of the class and cover more than the written material. You will be held accountable for everything discussed in the lectures, so your attendance is important.

Problem Sessions: T & H 10:10 -10:30 am in WEB 2250 (directly after class)

We cover a lot of material in this class and there is rarely enough lecture time to work examples or to answer your questions in detail. I will not cover new material in the problem session, so you can get by without staying, but I think you'll find it worth your while.

Textbook:

The text contains a great deal of practical, useful information beyond the theoretical material we cover in this class. It should prove to be a good reference. Unfortunately it contains many errors (See: www.eg.bucknell.edu/physics/ph235/ & download the errata pages). I ask that you let me know when you find errors so that I can share them.

Handouts:

There will be a lot of handouts for, homework, labs, notes, etc.. I will hand these out before class and/or place them by the doors, look for them as you enter class. I will leave any extras outside my office until they are all gone (my virtual web site). You may also have to buy one or more copy packets. Many of the handouts may be downloaded from the class web site; <http://www.ece.utah.edu/~ece2210/>

Homework, homework, and more homework:

50 pts.

I will assign many problems for you to turn in, most of which will come from hand-outs, expect homework at every lecture. Homework will be your main study tool. As such, I'll give you all the answers so that you can check your work immediately. In fact, you'll have to self-correct your homework. If you can't get the answer, check the web site for corrections, study some more, come to the problem session, ask for help, or see the posted solutions. Sometimes I even post solutions *before* the homework is due. So, you might ask, "Why is it handed in and 'graded'?" Well, to answer a question with a question, "Would you even do it otherwise?"

Your homework should be neat and clear and show all your work. For most problems the grader will simply check to see that you've done it and that your paper shows the necessary work to get the answer. Only a few problems will be checked in greater detail. You may collaborate with others to learn how to do the homework, but will need to hand in your own work. Copying or allowing another student to copy your work is considered cheating..

You will probably learn more from doing the homework than any other part of this class. If you thoroughly understand the homework, you will know what the class is about, and the exams should give you no trouble.

Near the ECE office on the 3rd floor of MEB you'll find some lockers with slots in the doors. Drop your homework in the ECE 2210 HOMEWORK locker by 5:00 p.m. of the due date. I will accept *some* late homework for *some* credit. Bring it directly to me, and don't do it habitually. Solutions will be posted in a glass case, also near the office. Graded homework, lab notebooks and exams will be returned to a file cabinet outside my office. Access may or may not be limited, your choice. If you want your material returned to the locked drawer simply remove your file and slip it under my door. Otherwise your material will be in the unlocked drawer and will not be secure.

Midterm: 100 pts.

One 50 minute midterm will cover material up to the time of the test. My exams are designed to see if you learned concepts and problem solving strategies and whether you can work with them, sometimes in new and different ways. Don't try to memorize formulas or specific problems. Exams also cover what you learn in the labs. All exams are open book, open notes.

Final: In your last lab (ask 1st day), or Thurs., 9:10am 10/20/10 (Recommended) 100 pts.

The 50 minute final will be comprehensive with greater emphasis on the most recent material. I highly recommend that you take the exam on Thurs., 10/21 so that you will have enough time to study. If you want to take the your final in your last lab, you will need to tell me at the first class so that you can start labs the first week. If you say nothing the first day then you will have to take the exam on Thurs., 10/21, (which is the best choice by far).

Labs: MEB 2365 60 pts.

Lab will be held every week, including the last week of class. Many of the subjects covered in lab aren't covered anywhere else in class, so make sure you pay attention and read the lab instructions. You will have to keep a laboratory notebook as a requirement of the lab. Your lab TA will collect and grade these notebooks.

Labs are **not optional**. For each lab that you miss or fail (< 60% score), your final grade will suffer a **half letter drop** (5% of possible points). Be sure to make-up any labs you miss or fail.

Grades:

	<u>Pts</u>	<u>% of total</u>	<u>Grade</u>
Homework:	50	> 93	A
Labs:	60	90-93	A-
Midterm:	100	87-90	B+
Final:	<u>100</u>	83-87	B
Total:	310	80-83	B-
		77-80	C+
Failed lab:	-15	73-77	C
		70-73	C-
Cheating:	-310	67-70	D+
		63-67	D
		60-63	D-
		< 60	E

If you want any deviations from the normal requirements (say credit for labs, you've done before) you will need to see me before the work would normally be due and get an agreement *in writing*. You'll need to turn in your copy of the agreement with your final, so I'll remember to grade you properly.
