Ex: Perform the following calculations, and write the answers with appropriate prefixes (such as $\mu, \mathrm{m}, \mathrm{k}$, etc.) for engineering units:
a) $v=5.6 \mathrm{~mA} \cdot 0.5 \mathrm{k} \Omega$

Note: $\mathrm{V}=\mathrm{A} \cdot \Omega$
b) $\quad R=1.2 \mathrm{k} \Omega+700 \Omega$

SoL'n: a) The product of m and k is $10^{0}=1$. The product of A and $\Omega$ is V .

$$
v=5.6 \mathrm{~mA} \cdot 0.5 \mathrm{k} \Omega=2.8 \mathrm{~V}
$$

b) We may convert the $1.2 \mathrm{k} \Omega$ to $1200 \Omega$ and add $700 \Omega$, or we may convert the $700 \Omega$ to $0.7 \mathrm{k} \Omega$ and add $1.2 \mathrm{k} \Omega$. Either approach is acceptable, although the latter yields a result that is already in appropriate engineering format.

$$
R=1.2 \mathrm{k} \Omega+700 \Omega=1.9 \mathrm{k} \Omega
$$
